

INTRODUCING

PIPE PULL™ TRENCHLESS PIPE REPLACEMENT METHOD

Until recently sewer and drain replacement meant major excavation and removal of lawns, trees, concrete surfaces, driveways, parking lots and other valuable structures.

NOT ANYMORE.

Don't settle for the high cost, damage and disruption of outdated sewer and drain pipe replacement techniques.

Call today for a free evaluation of your sewer or drain replacement project.

How Do We Do It?

We replace sewer and drain lines using our patented Pipe Pull™ method of Trenchless Pipe Replacement. The Pipe Pull™ technique does not require any major excavating or the disruptive damage of old fashioned “dig it up” methods.

The Pipe Pull™ method avoids the expensive replacement costs of landscaping, driveway and parking lot surfaces, not to mention interruptions to your business or other operations that can make even a small project become an expensive nightmare.

The Pipe Pull™ method can preserve your beautiful lawns, driveways and other landscaping items.

Pipe Pull™ can greatly reduce costs, business disruptions and the need for equipment removal in retail areas.

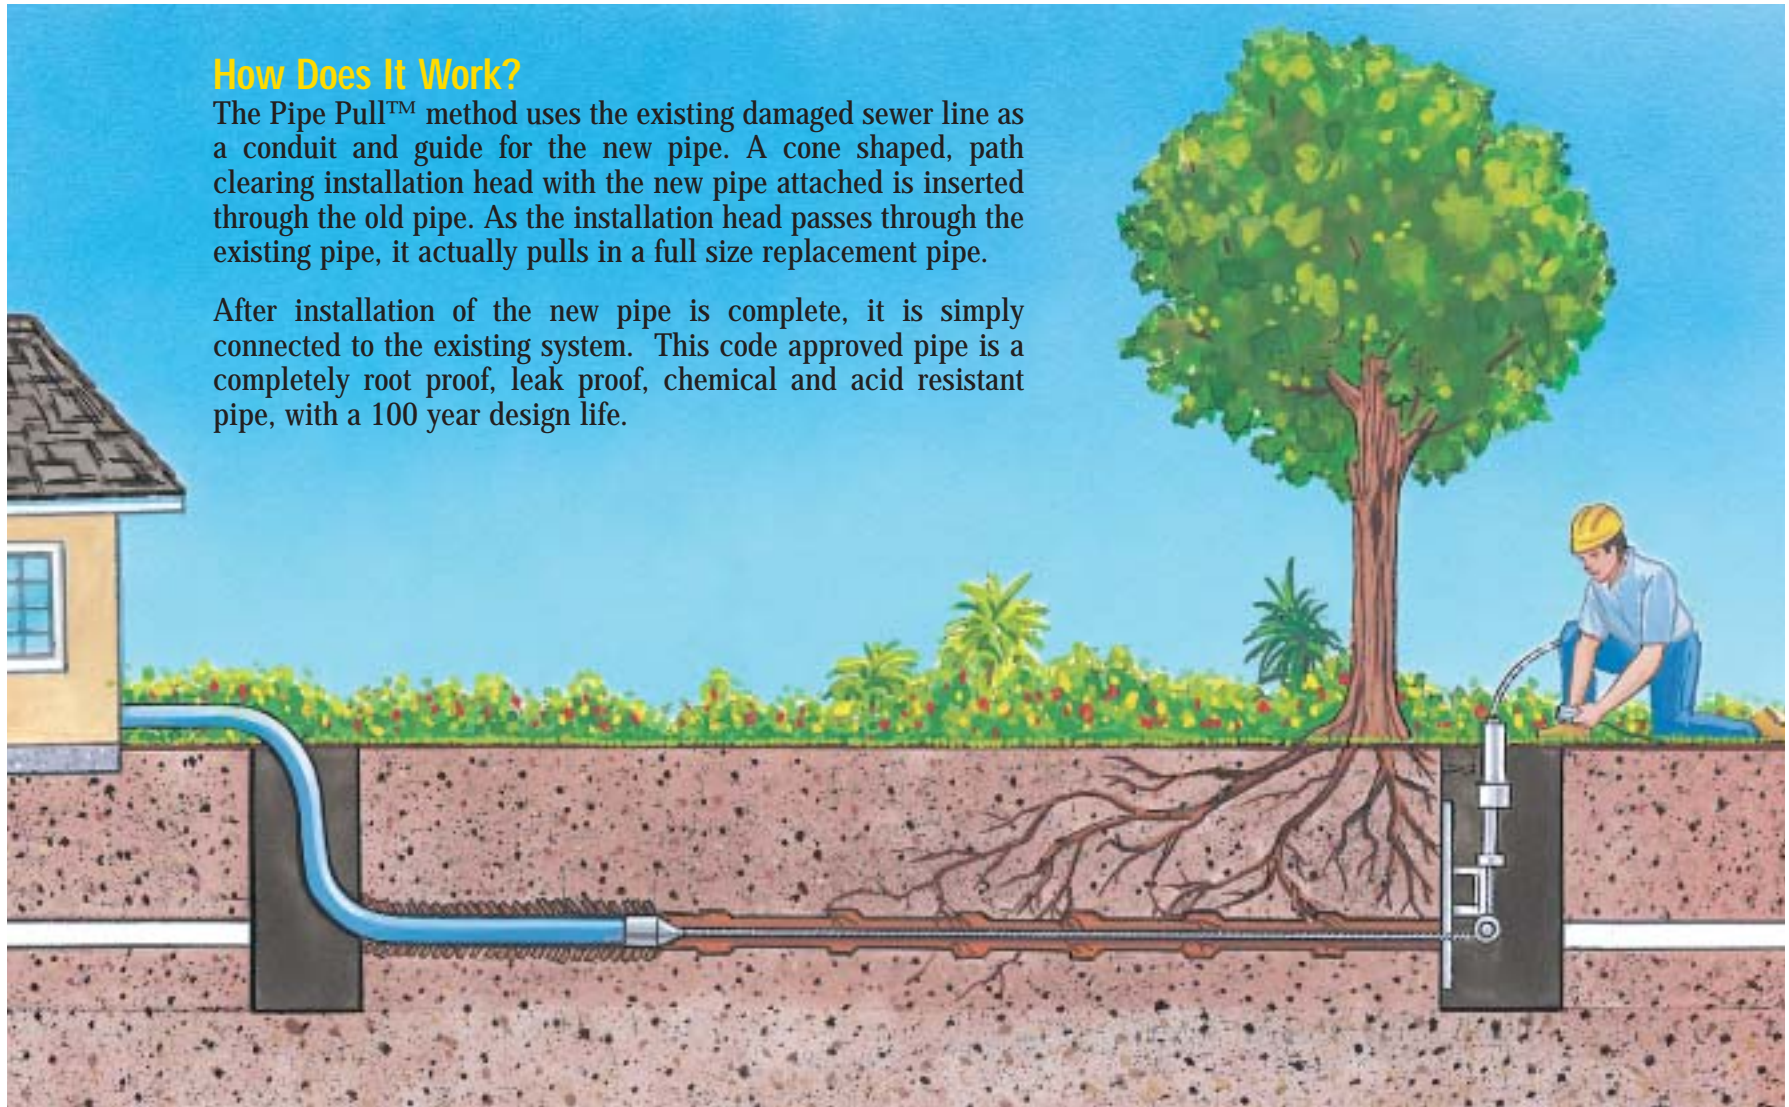

Pipe Pull™ can replace damaged pipe under parking lots with little or no surface excavation.

Residential • Commercial • Industrial

How Does It Work?

The Pipe Pull™ method uses the existing damaged sewer line as a conduit and guide for the new pipe. A cone shaped, path clearing installation head with the new pipe attached is inserted through the old pipe. As the installation head passes through the old pipe, it actually pulls in a full size replacement pipe.

After installation of the new pipe is complete, it is simply connected to the existing system. This code approved pipe is a completely root proof, leak proof, chemical and acid resistant pipe, with a 100 year design life.

PIPE PULL™ TRENCHLESS PIPE REPLACEMENT METHOD

- Greatly reduced costs
- No major excavating
- Preserve your beautiful trees, shrubs, lawns and other landscaping items
- No moving of stationary equipment
- No damage to concrete floors, driveways, parking lots, patios, buildings, etc.
- Less disruptive to businesses or other operations
